

From email: "Saw this very large avalanche on Climax. The crown looks fresh, so it likely occurred the day or night of 4/1?

Hard to tell but the crown looks to be about 4-6' deep at its deepest. The debris ran to the creek.

E aspect at 10000'." Photo: N Hance

Advisory Region Cooke City Longitude -109.92W Latitude 44.97N

Avalanche Details: Natural Avalanche on Climax Path
