## **Natural Avalanches Alex Lowe**

Date Sat, 03/09/2024 - 13:25 Activity Snowboarding

From the ridge between Blackmore and Elephant we saw multiple natural large slab avalanches in the upper South Cotttonwood drainage. More natural avalanches not shown, mostly on northerly aspects. Appeared fairly recent and deep. Decided against skiing Alex Lowe and opted for good turns on Blackmore. Warm with moderate/strong southwest winds, minor transport.

Region Northern Gallatin Location (from list) Alex Lowe Peak Observer Name Logan Gabrielson
